

**Amendment to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (Currently Amended)      A method comprising:  
    [[a.]] hosting a first user and a second user;  
    [[b.]] transmitting a broadcast service to said first user;  
    [[c.]] receiving a broadcast request from said second user, said broadcast request  
~~for requesting~~ said broadcast service; and  
    [[d.]] transmitting said broadcast service to said second user.
2. (Currently Amended)      The method of claim 1, further comprising  
receiving a notification request from said first user after said transmitting of broadcast service to  
said first user, said notification request comprising:  
    [[a.]] information regarding said broadcast service being transmitted to said first  
user; and  
    [[b.]] identification information of said second user for notifying said second user  
regarding said broadcast service being transmitted to said first user.
3. (Original)      The method of claim 2, further comprising notifying said second  
user regarding broadcast service being transmitted to said first user before said receiving of  
broadcast request from said second user.
4. (Previously Presented)      The method of claim 3, wherein said broadcast  
service is transmitted to said second user via a session initiation protocol server.
5. (Original)      The method of claim 4, further comprising providing voice  
communication between said first user and said second user, said voice communication being  
simultaneous with said transmission of broadcast service to said second user.

6. (Original) The method of claim 5, wherein said first user receives broadcast service on a first wireless device.

7. (Original) The method of claim 6, wherein said first user receives voice communication over said first wireless device.

8. (Original) The method of claim 7, wherein said second user receives broadcast service on a second wireless device.

9. (Original) The method of claim 8, wherein said second user receives voice communication over said second wireless device.

10. (Original) The method of claim 9, wherein said first wireless device and said second wireless device are configured to receive Digital Video Broadcasting – Terrestrial signals.

11. (Original) The method of claim 10, wherein said first wireless device and said second wireless device are configured to communicate using session initiation protocol.

12. (Original) The method of claim 9, wherein said broadcast services comprise audio-visual content.

13. (Original) The method of claim 9, further comprising receiving broadcast services from at least one broadcaster connected therewith.

14. (Original) The method of claim 13, further comprising receiving broadcast content from at least one Internet service provider connected therewith.

15. (Currently Amended) A method comprising:  
[[a.]] receiving a notification regarding availability of a broadcast service from a first user of a telecommunication network;

[[b.]] requesting the broadcast service from a broadcast service provider; and  
[[c.]] receiving the requested broadcast service from said broadcast service  
provider,

wherein a simultaneous connection is maintained with said first user while  
obtaining the broadcast service, said simultaneous connection being used to transmit voice  
therebetween.

16. (Original) The method of claim 15, wherein said broadcast service is received  
via a telecommunication service provider.

17. (Currently Amended) The method of claim 16, wherein said notification  
comprises:

[[a.]] information regarding said broadcast service being transmitted to said first  
user; and

[[b.]] identification information of said second user for notifying said second user  
regarding said broadcast service being transmitted to said first user.

18. (Original) The method of claim 17, wherein said broadcast service and said  
voice information are received on a wireless device, said wireless device equipped to receive  
Digital Video Broadcasting – Terrestrial signals, said wireless device further configured for  
session initiation protocol.

19. (Original) The method of claim 18, further comprising receiving download  
information regarding the requested broadcast service from said broadcast service provider  
before said receiving of the requested broadcast service.

20. (Original) The method of claim 19, wherein said broadcast service is in  
audio-visual format.

21. (Currently Amended) ~~A system~~ An apparatus comprising:

[[a.]] a memory unit; and

[[b.]] a processor in communication with said memory unit, said processor configured for:

hosting a first user and a second user,  
transmitting a broadcast service to said first user,  
receiving a broadcast request from said second user, said broadcast request  
~~for requesting~~ said broadcast service, and  
transmitting said broadcast service to said second user.

22. (Currently Amended) The ~~system-apparatus~~ of claim 21, wherein said processor is further configured for receiving a notification request from said first user after said transmitting of broadcast service to said first user, said notification request comprising:

[[a.]] information regarding said broadcast service being transmitted to said first user; and

[[b.]] identification information of said second user for notifying said second user regarding said broadcast service being transmitted to said first user.

23. (Currently Amended) The ~~system-apparatus~~ of claim 22, wherein said processor is further configured for notifying said second user regarding broadcast service being transmitted to said first user before said receiving of broadcast request from said second user.

24. (Currently Amended) The ~~system-apparatus~~ of claim 23, wherein said broadcast service is transmitted to said second user via a session initiation protocol server.

25. (Currently Amended) The ~~system-apparatus~~ of claim 24, wherein said processor is further configured for providing voice communication between said first user and said second user, said voice communication being simultaneous with said transmission of broadcast service to said second user.

26. (Currently Amended) The ~~system-apparatus~~ of claim 25, wherein said first user receives broadcast service on a first wireless device.

27. (Currently Amended) The ~~system-apparatus~~ of claim 26, wherein said first user receives voice communication over said first wireless device.

28. (Currently Amended) The ~~system-apparatus~~ of claim 27, wherein said second user receives broadcast service on a second wireless device.

29. (Currently Amended) The ~~system-apparatus~~ of claim 28, wherein said second user receives voice communication over said second wireless device.

30. (Currently Amended) The ~~system-apparatus~~ of claim 29, wherein said first wireless device and said second wireless device are configured to receive Digital Video Broadcasting – Terrestrial signals.

31. (Currently Amended) The ~~system-apparatus~~ of claim 30, wherein said first wireless device and said second wireless device are configured to communicate using session initiation protocol.

32. (Currently Amended) The ~~system-apparatus~~ of claim 29, wherein said broadcast services comprise audio-visual content.

33. (Currently Amended) The ~~system-apparatus~~ of claim 29, wherein said processor is further configured for receiving broadcast services from at least one broadcaster connected therewith.

34. (Currently Amended) The ~~system-apparatus~~ of claim 33, wherein said processor is further configured for receiving broadcast content from at least one Internet service provider connected therewith.

35. (Currently Amended) ~~A system~~ An apparatus comprising:  
[[a.]] a memory unit; and

[[b.]] a processor in communication with said memory unit, said processor configured for:

receiving a notification regarding availability of a broadcast service from a first user of a telecommunication network,

requesting the broadcast service from a broadcast service provider, and  
receiving the requested broadcast service from said broadcast service provider,

wherein a simultaneous connection is maintained with said first user while obtaining the broadcast service, said simultaneous connection being used to transmit voice therebetween.

36. (Currently Amended) The system-apparatus of claim 35, wherein said broadcast service is received via a telecommunication service provider.

37. (Currently Amended) The system-apparatus of claim 36, wherein said notification comprises:

[[a.]] information regarding said broadcast service being transmitted to said first user; and

[[b.]] identification information of said second user for notifying said second user regarding said broadcast service being transmitted to said first user.

38. (Currently Amended) The system-apparatus of claim 37, wherein said broadcast service and said voice information are received on a wireless device, said wireless device equipped to receive Digital Video Broadcasting – Terrestrial signals, said wireless device further configured for session initiation protocol.

39. (Currently Amended) The system-apparatus of claim 38, wherein said processor is further configured for receiving download information regarding the requested broadcast service from said broadcast service provider before said receiving of the requested broadcast service.

40. (Currently Amended) The ~~system apparatus~~ of claim 39, wherein said broadcast service is in audio-visual format.

41. (Currently Amended) A wireless device comprising:  
~~a means for communicating~~ a communication unit configured to communicate  
with a second communication device, said ~~means for communicating being capable of~~  
~~supporting communication unit configured to support~~ multimedia applications and ~~having~~  
~~capability to configured to~~ engage in high-speed data transfer; and  
a memory unit;  
~~b. means for receiving~~ a receiver configured to receive stationary and portable  
reception of broadcast and data services; and [[.]]  
a processor in communication with said communication unit, said memory unit  
and said receiver, said processor configured to:  
receive a notification from said second communication device regarding  
availability of a broadcast service being transmitted to said second communication  
device; and  
request the broadcast service from a broadcast service provider,  
wherein said ~~means for communicating communication unit~~ and said ~~means for~~  
~~receiving stationary and portable reception of broadcast and data services receiver~~ are  
operational concurrently.
